

IDAHO WHEAT VARIETIES

Released: July 12, 2004

2004 IDAHO WHEAT VARIETIES – SUPPLEMENT

During the 2004 survey, we collected positive reports for 96 different wheat varieties. The top twenty varieties account for 77.3 percent of the wheat planted in Idaho for the 2004 crop. This supplement lists estimates for 33 additional varieties which account for 18.3 percent of Idaho's total wheat planted. Durum wheat varieties are not included since durum wheat is not part of Idaho's wheat acreage estimates.

Included in the report are acreages of wheat in which multiple varieties were mixed at seeding. A total of 20 different combinations of wheat varieties were reported, several involving more than two varieties. Soft white winter wheat accounted for most of the mixes, with 17 of the 20 combinations. Only two of these combinations had sufficient reports and acreage to be published.
